INTEGRATED

THE PROBLEM

Most traders lose before they begin.

The barrier isn't intelligence — it's information overload, no defined rules, and emotional decisions with zero accountability.

Chart Paralysis

Beginners face dozens of conflicting indicators. No clear entry signal. No exit plan. They guess — and lose.

No Risk Management

80% of retail traders blow their accounts due to incorrect position sizing and no stop-loss discipline.

Emotional Trading

FOMO entries, revenge trades, moving stop losses — all driven by emotion. No accountability system exists.

No Verified Track Record

Signal providers claim high win rates with zero verifiable history. Traders can't evaluate performance.

Wrong Session Trading

Beginners trade at any hour, unaware that 70% of forex volume occurs in a 4-hour London–NY overlap window.

SA Market Gap

South African traders receive generic US-centric tools not localised for ZAR accounts or Exness broker access.

THE SOLUTION

Your personal trade planner.

TradeRadar scans 33 instruments in real time and delivers complete, ready-to-execute trade plans — no chart reading required.

Clear Signals

BUY / SELL / WAIT with full trade plan.
Entry zone, SL and 3 TP levels. No guessing.

Risk Calculator

Enter balance + risk %. Get exact lot size to protect your account on every trade.

Verified Track Record

Every signal logged. Live equity curve, win rate, and monthly returns — transparent.

Discipline Journal

Log emotion + mistakes. Discipline score 0–100 tracks psychology, not just P&L.

HOW IT WORKS

Market data to **executed trade** in 4 steps.

TradeRadar handles the analysis. You handle the execution. Every step is guided.

Signal lifecycle — every outcome tracked:

PLATFORM FEATURES

Everything a disciplined trader needs.

Live Signal Engine

Real-time scanning of 33 instruments. RadarScore 0–100. Refreshes every 30 seconds. Session-aware with London/NY/Overlap boosts.

Trade Plan Cards

Entry zone, SL, TP1/2/3, direction, confidence grade A/B/C. One-tap "Copy MT5 Plan" with full setup reasoning.

Lot Size Calculator

Input balance + risk %. Instantly get suggested lot size based on stop distance and instrument pip value.

Trading Journal

Log emotion (calm/FOMO/revenge), plan adherence, mistakes. Auto-calculates discipline score 0–100.

Equity Curve & Analytics

Live equity curve from starting balance. Monthly tables. Max drawdown, win rate, open vs closed P&L — all verifiable.

Session Clock

Live SAST session indicator — London, NY, Overlap (14:00–18:00), or Off Hours. Best signals in peak liquidity windows.

Web Push Alerts

Opt-in push notifications for new signals, TP hits, SL events. Stay informed without watching the screen 24/7.

Security (2FA)

Supabase Auth with TOTP 2FA via Google Authenticator or Authy. Role-based access control across all tiers.

BUSINESS MODEL

Subscription + Broker Partnership revenue.

Trading tools & analytics segment

Why South Africa?

- Fastest-growing retail forex market in Africa (FSCA-regulated)
- Exness is the #1 broker by active SA users
- ZAR-priced trading tools are scarce — competitors price in USD
- Strong appetite for supplementary income generation
- High mobile penetration; traders active on social media

Why Exness Partnership?

- Exness processes \$4T+ monthly trading volume globally
- CPA commissions per funded account — transparent affiliate
- 30-day free trial incentive creates zero-friction funnel
- Direct broker link integration — no platform-switching
- Partnership expands distribution to Exness user base

COMPETITIVE EDGE

Built different. Built local.

TradeRadar doesn't compete with Bloomberg or TradingView. It serves the beginner who needs rules, not raw charts.

FEATURE	TRADERADAR	TRADINGVIEW SIGNALS	TELEGRAM GROUPS	MT4 EAS
ZAR-priced & SA-focused	✓	X	Rarely	X

ROADMAP

Where we're going.

PHASE 1 — LIVE NOW ✓**Core Platform**

- Signal engine (33 instruments)
- Live dashboard + trade plans
- Lot size calculator
- Trading journal + discipline score
- Equity curve + performance analytics
- Supabase auth + TOTP 2FA
- Exness affiliate integration
- R499/mo pricing + 7-day trial

PHASE 2 — Q3 2026**Mobile App**

- React Native / Expo iOS + Android
- Native push notifications
- Biometric authentication
- App Store + Play Store distribution
- Offline signal history access
- Mobile-optimised journal

PHASE 3 — Q4 2026**Intelligence Layer**

- AI-generated trade summaries
- Pattern recognition upgrades
- Live backtesting engine
- Multi-broker support
- Copy trading referral system
- Community leaderboard

PHASE 4 — 2027**Scale Across Africa**

- Nigeria, Kenya, Ghana expansion
- Multi-currency pricing
- B2B white-label API
- FSCA regulated advisory tier
- Institutional data partnerships

Part 2

Trade Strategy Guide

The exact algorithm, filters, scoring logic, and execution rules
powering every TradeRadar signal.

5

Hard Filters

11

Score Factors

33

Instruments

STRATEGY FOUNDATION

Philosophy & Supported Instruments

TradeRadar is a rules-based, score-driven signal engine. Every signal passes five hard filters before a RadarScore is calculated. No signal fires unless the edge is mathematically confirmed.

CORE PRINCIPLES

- ✦ Trade only when score + confidence align
- ✦ Always set SL before entry
- ✦ Move SL to entry after TP1 hit (free ride)
- ✦ Risk 1–2% of account per trade max
- ✦ Journal every trade, every session

WHAT THE SYSTEM IS NOT

- X Not a guaranteed profit system
- X Not a signal copy service
- X Not designed for scalping under 15m TF
- X Not a replacement for risk management
- X Not suitable without a funded Exness account

SCORING ENGINE

RadarScore: 11-Factor Confidence Model

RadarScore = Σ (11 bonus factors) | Scale: 0 – 100 | Fires at ≥ 70 (asset-adjusted)

#	Factor	Max Points	Trigger Condition
01	Confidence Level	+20	VERY_HIGH=20, HIGH=15, MEDIUM=8
02	ATR Volatility	+10	HIGH vol=10, MEDIUM=7, LOW=3
03	RSI Momentum	+10	BUY: RSI 55–65 = 10pts, 50–55 = 6pts
04	ADX Trend Strength	+10	ADX $\geq$ 30=10, ADX $\geq$ 20=6, ADX $\geq$ 15=3
05	Price Move	+8	Strong directional candle body >60% range
06	Session Timing	+15	Overlap 14:00–18:00 SAST=+15, London/NY=+10
07	Fibonacci Level	+8	Price within 0.5% of 38.2%, 50%, 61.8% fib
08	Candlestick Pattern	+7	Engulfing, Pin Bar, Doji reversal confirmed
09	Entry Confirmation	+6	H1+H4 alignment, EMA confluence at entry zone
10	RR Validation	+4	Actual RR $\geq$ 1.5:1 confirmed at signal generation
11	S/R Proximity	+2	Entry within 0.3% of key S/R level

70–79**GOOD**

Valid signal. Standard risk sizing. Enter at market or limit.

80–89**STRONG**

High conviction. Consider full risk position up to 2%.

90–100**ELITE**

Exceptional confluence. Max size, aim for TP3.

HARD FILTER SYSTEM

5 Hard Filter Gates — All Must Pass

A signal is blocked if any filter fails. These gates run before RadarScore is calculated, preventing low-quality entries from reaching the score engine.

FILTER 1 · EMA-50 TREND ALIGNMENT

Price must be above EMA-50 on H1 for BUY signals. Price must be below EMA-50 on H1 for SELL signals. Counter-trend trades are blocked entirely.

FILTER 2 · RSI GUARDRAILS

BUY: RSI must be between 50 and 72 (not overbought). SELL: RSI must be between 28 and 50 (not oversold). Extreme readings block entry.

FILTER 3 · DIRECTIONAL BIAS

H4 and H1 timeframes must agree on direction. Conflicting multi-timeframe bias causes the signal to be suppressed until alignment is confirmed.

FILTER 4 · ENTRY ZONE VALIDITY

Current price must be within 1.5% of the calculated entry zone. If price has moved beyond the zone, the signal is invalid and will not fire.

FILTER 5 · MINIMUM CONFIDENCE LEVEL

Signal confidence must be MEDIUM or above. LOW confidence signals are suppressed system-wide. Gold requires HIGH or VERY_HIGH confidence — MEDIUM is blocked for XAUUSD.

ASSET-SPECIFIC MINIMUM RADARSCORE THRESHOLDS

Asset Class	Min Score	Min Confidence	Reason for Higher Bar
Gold (XAUUSD)	74	HIGH / VERY_HIGH	Extreme volatility, news-driven spikes
Indices (US500, NAS100, etc.)	72	MEDIUM+	Gap risk, correlated to macro events
Oil (USOIL / UKOIL)	72	MEDIUM+	Supply data releases, geopolitical risk
Forex Majors & ZAR	70	MEDIUM+	Standard liquid pairs, tightest spreads
Crypto (BTC, ETH, etc.)	70	MEDIUM+	24/7 market but high noise environment

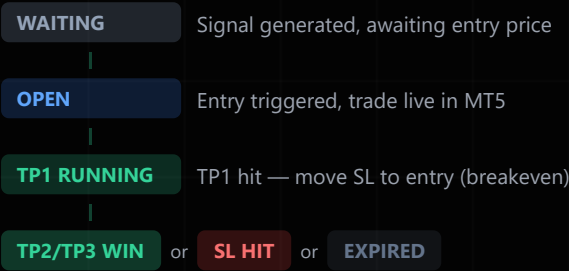

EXECUTION FRAMEWORK

Trade Plan Structure, Signal Lifecycle & Sessions

TRADE PLAN FORMULA

- Entry: signal entry zone ± 1.5%
- SL: ATR × 1.5 below entry (BUY)
- TP1: Entry + (SL distance × 1.5)
- TP2: Entry + (SL distance × 2.5)
- TP3: Entry + (SL distance × 4.0)

SIGNAL LIFECYCLE

MARKET SESSIONS (SAST / GMT+2)

Session	SAST Time	Score Bonus
London–NY Overlap	14:00–18:00	+15 pts
London Open	09:00–14:00	+10 pts
New York Session	18:00–23:00	+10 pts
Asian / Off-Hours	23:00–09:00	+0 pts

Market Break Windows — No New Entries

- Gold (XAUUSD): Fri 23:00 – Sun 01:00 SAST
- Forex: Fri 22:00 – Sun 00:00 SAST (weekend gap)
- Indices: Daily close breaks (varies by exchange)
- Crypto: 24/7 — no break windows apply

RISK & EXECUTION

Position Sizing, Execution Rules & Pre-Trade Checklist

CONSERVATIVE

1%

Score 70–79 or new account.

STANDARD

1.5%

Score 80–89. Default after 3-month track record.

MAX

2%

Score ≥90 only. Never exceed 2%.

$$\text{Lot Size} = (\text{Account Balance} \times \text{Risk}\%) \div (\text{SL in pips} \times \text{Pip Value per Lot})$$

ALWAYS DO

- ✓ Confirm entry zone before placing order
- ✓ Set SL and TP levels before entry
- ✓ Move SL to entry after TP1 hit
- ✓ Journal the trade immediately after entry
- ✓ Check market session before entering
- ✓ Verify no major news within 30 min

NEVER DO

- X Enter without a signal (FOMO)
- X Move SL further away to avoid loss
- X Add to a losing position
- X Trade during break windows
- X Trade Gold on MEDIUM confidence
- X Risk more than 2% on any single trade

PRE-TRADE CHECKLIST

- | | | |
|--|--|--|
| ☐ Signal status = WAITING or OPEN? | ☐ RadarScore meets asset threshold? | ☐ Price still inside entry zone ($\leq 1.5\%$)? |
| ☐ Active trading session (not off-hours)? | ☐ No major news in next 30 minutes? | ☐ Lot size calculated and verified? |

ONBOARDING

Getting Started with TradeRadar

OPTION A — STANDARD TRIAL (7 DAYS)

- 1 Visit traderadar.app and click Get Started
- 2 Register with email and set a strong password
- 3 Check email and click the activation link
- 4 7-day free trial begins immediately on login
- 5 Upgrade to Pro at R499/mo or R224/mo annual

OPTION B — EXNESS 30-DAY TRIAL

- 1 Open a live Exness account via TradeRadar referral link
- 2 Complete KYC verification with Exness
- 3 Register on TradeRadar with the same email
- 4 30-day Pro access unlocks automatically
- 5 Fund your Exness account and start trading

PLATFORM OVERVIEW — 4 MAIN SECTIONS

Dashboard

Live signal feed with market session indicator, active signals count, and current RadarScore leaderboard.

Signals

Full signal detail view with entry, SL, TP1/2/3, score breakdown, confidence tier, and execution timer.

Journal

Log trades, tag emotions, rate plan adherence, and view discipline score trends over time.

Performance

Win rate, RR history, drawdown chart, best/worst instrument, and monthly P&L summary.

SIGNAL INTERFACE

How to Read a TradeRadar Signal Card

EURUSD

BUY

RadarScore

84

HIGH Confidence

Entry

1.08450

Stop Loss

1.08100

TP1

1.08975

TP2

1.09325

TP3

1.09850

RR Ratio

1:2.5

- **Instrument + Direction**
The pair or asset being traded and whether to BUY (long) or SELL (short).
- **RadarScore (0–100)**
The composite signal strength. 70+ required. 90+ = Elite setup. Higher = more confluence.
- **Confidence Badge**
VERY_HIGH / HIGH / MEDIUM. Never trade Gold at MEDIUM. Always check this badge first.
- **Entry Price**
The ideal entry zone. Enter within 1.5% of this price only. If price has moved beyond it, skip the trade.
- **Stop Loss**
Always place SL at or wider than this level. Never tighten SL below this to reduce risk.
- **TP1 / TP2 / TP3**
Close 40% at TP1 and move SL to entry. Close 35% at TP2. Let remaining 25% run to TP3.
- **RR Ratio**
Risk-to-reward at TP2. Target minimum 1:1.5. If RR shows below 1:1.5, treat as low priority.

TRADE EXECUTION

8-Step MT5 Trade Execution Guide (Exness)

- 1 Open TradeRadar Signal**
Tap the signal card to expand. Note Entry, SL, TP1, TP2, TP3 values and RR ratio.
- 2 Calculate Lot Size**
Use the built-in lot calculator: enter account balance, risk %, and SL pips to get the correct lot size.
- 3 Open MT5 — Find the Instrument**
In MT5, open Market Watch. Search the symbol (e.g., EURUSDm or XAUUSDm for Exness micro accounts).
- 4 Tap New Order**
Long press the symbol → New Order. Or tap Trade → New Order from the chart view.
- 5 Set Order Type**
Select Market Execution for immediate entry, or Buy/Sell Limit to set a pending order at the entry price zone.
- 6 Enter Volume, SL and TP**
Set Volume = calculated lot size. Set Stop Loss at signal SL level. Set Take Profit at TP1 first.
- 7 Confirm and Place Order**
Review all values. Tap Buy/Sell to confirm. Order appears in Trades tab immediately.
- 8 Log in TradeRadar Journal**
Immediately log the trade in TradeRadar: select the signal, enter lot size, tag emotional state.

LOT CALCULATOR EXAMPLE (EURUSD)

Account: \$500 USD | Risk: 1% = \$5.00

SL Distance: 35 pips | Pip Value (standard): \$10/pip

Lot Size = $\$5.00 \div (35 \times \$10) = 0.014$ lots (round to 0.01)

JOURNAL & ACCOUNT

Trade Journal, Discipline Score & Account Settings

DISCIPLINE SCORE SYSTEM

Every journal entry updates your Discipline Score, which starts at 100 each calendar month. Deductions are applied based on tags you select when logging a trade.

Tag / Behaviour	Deduction
Did not follow plan	−35 pts
FOMO or revenge trade	−25 pts
Deliberate mistake	−20 pts
Anxious / emotional entry	−15 pts
Actual RR <50% of planned	−15 pts

SUBSCRIPTION TIERS

Plan	Price	Trial
Pro Monthly	R499/mo	7-day free
Pro Annual	R224/mo	7-day free
Exness Affiliate	Free	30-day full Pro

ACCOUNT SETTINGS

Two-Factor Authentication (2FA)

Settings → Security → Enable 2FA. Use an authenticator app (Google Authenticator or Authy). Strongly recommended.

Notification Preferences

Toggle push notifications for new signals, TP hits, SL hits, and weekly performance summaries in Settings → Notifications.

Account & Billing

Manage subscription, update payment method, and download invoices from Settings → Subscription.

FAQ

Can I use TradeRadar on a demo account?

Yes. All signal features work on demo MT5. Recommend at least 2 weeks demo before going live.

What broker must I use?

Exness is the official broker partner. Other brokers can be used but Exness affiliate trials only apply to Exness accounts.

Does the system auto-trade for me?

No. TradeRadar provides signals and analytics only. All trade execution is manual via your MT5 account.
